Relaxing the steady-state assumption displaces forest soil carbon models along the trade-off between litter input and turnover

Lorenzo Menichetti, Aleksi Lehtonen, Samuli Launiainen, Boris Ťupek, Olli-Pekka Tikkasalo, Juha Heikkinen, [possibly others; order and affiliations to be decided; Mikko Peltoniemi to be asked]

Draft of October 21, 2026

[Title: chosen before the storyline was rebuilt (trilemma, saturation); revisit.]

Abstract

[Abstract.]

1 Introduction

[Introduction.]

2 Materials and methods

[To be merged from `HIKET_methods_v2.tex` once reviewed.]

3 Results and discussion

3.1 R1 — The problem, tested: a soil started in balance

[R1.]

3.2 R2 — The resolution: relaxing the steady-state assumption

[R2.]

3.3 R3 — Consequences for forecasts

[R3.]

3.4 R4 — Future development: why the models fail locally

[R4.]

4 Conclusions

[Conclusions.]

Acknowledgements
